Client Dr. Okim Kang

Team Members:

- ❖ Joseph Vargovich -> Leader
- ❖ Kehan Cao -> Release manager
- ❖ Andrew Munoz -> Customer Communication
- ❖ Christian Bito-on -> Architect
- ❖ Malik Jones -> Editor & Recorder

Dr. Okim Kang

- ❖ Director of the Applied Linguistics Speech Lab, NAU
 - **Three members of her lab:** Kevin H., SungEun C., An Hoang N.
 - Research focuses on Computer-Assisted Pronunciation Training (CAPT)
- ❖ Main goal is to analyze the nature of accent speech of non-native speakers in English

Problem Statement

- ❖ Lack of mobile software for foreign language learners that both focuses on pronunciation and encourages learning through gamification.
- ❖ **CAPT Software drawbacks:**
 - Can be both costly to the learner and prohibitive for researchers.
 - Does not allow course designers to create relevant tasks for learners.
 - No relevant feedback on key features of pronunciation
 - Does not implement gamification to motivate the practice of pronunciation.
 - Most modern ASR technology is difficult for linguistics researchers to use

Solution Overview

- ❖ Gamified mobile app with web integration designed to be fully customizable
- ❖ **Web Application**
 - Simple UI
 - Giving designers the ability to customize their lesson plans
 - Provide feedback on users work
- ❖ **Gamified Mobile App**
 - Enjoyable & Engaging
 - Memorable and Educational
 - Users accounts to keep track of progress & Badges and Achievements.

Tech Integration of Proposed Solution

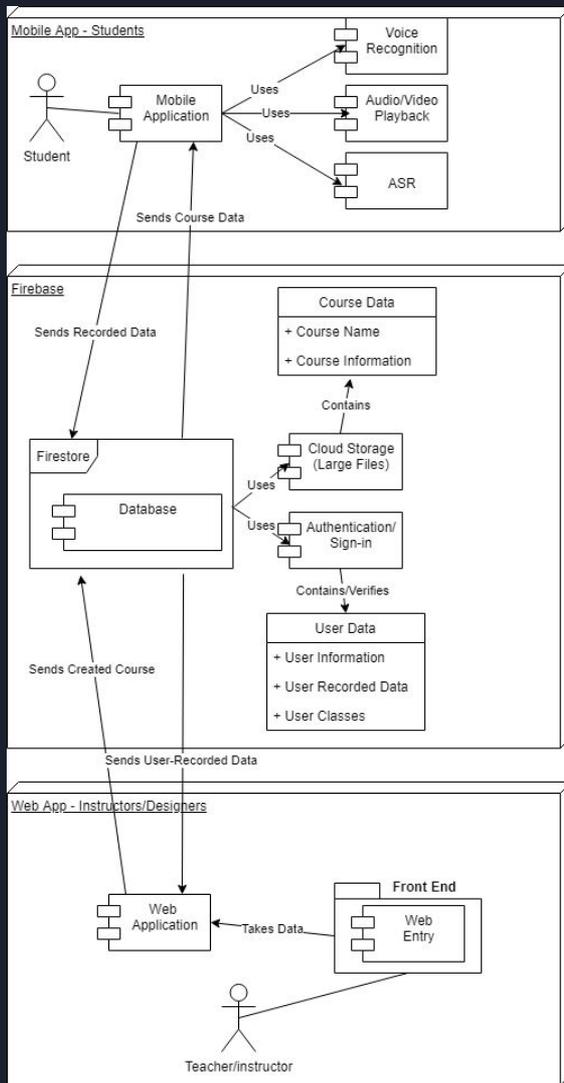

Requirements Review

Requirements

- ❖ App should provide quick ASR feedback on production (speaking) tasks, and instant feedback on recognition tasks that do not require ASR
- ❖ Gamification in the form of badges and rewards for good progress.
- ❖ App should be useful to learners, helping them to track what they need to practice and what they are already good at.
- ❖ App should integrate well into a classroom setting as an easy-to-use application that allows for data analysis and feedback on students' work.

Architecture & Implementation Review

- ❖ Mobile Application for Learners to practice production and perception of English
- ❖ Backend database to glue the components together
- ❖ Web Application to build Courses and review learner data

Prototype Review

Demo 1: Showcasing a sample lesson on the mobile application.

Demo 2: Showing feedback sent to the website dashboard for review.

Challenges & Resolutions

Automatic Speech Recognition (ASR)

- ❖ ASR is difficult for a number of reasons, mainly stemming from a cross-platform viewpoint:
 - ASR Plugin packages developed for the platform utilize different technologies for IOS/Android
 - Requires a disclaimer when using our app for research
 - Very basic
 - Potential open-source ASR technologies have some drawbacks
 - Some only work on one platform
 - Some don't have documentation
 - Candidates that are developed for cross-platform are new/have not been further developed
- ❖ Solution: Devote extra time to develop a plugin of our own
 - Have a base
 - Implement further functions

Challenges and Resolutions: IOS

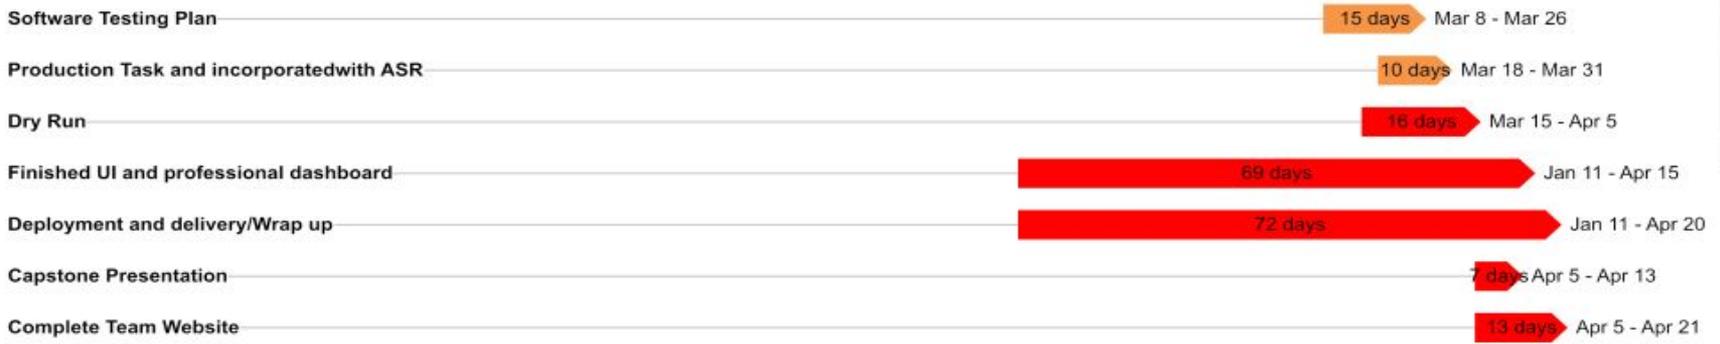

- ❖ IOS Audio Plugin
 - Plugin work in Android can't work in IOS
 - The way build IOS app is different from Android
- ❖ Resolution
 - Recode app plugin part of IOS with a new plugin
 - Use different plugin in different platform

Testing Plan

- ❖ **Unit Testing**
 - ***Mobile Application***
 - Lesson Setup
 - ASR Download
 - Achievement Reception
 - ***Web Application***
 - Course Creation/Modification
- ❖ **Integration Testing**
 - ***Website Dashboard & Database***
 - ***Mobile Application & Database***
 - ***Mobile Application & Vosk ASR library***
- ❖ **Usability Testing**

Conclusion

- ❖ Pronunciation is critical to learning a language
- ❖ Dr. Kang's team desires a more integrated implementation
- ❖ Our Solution: create a system where the web and mobile applications work together
 - Database connection
 - Gamification aspect
 - ASR integration
- ❖ We are confident that we will provide Dr. Kang a product she will be satisfied with!
